No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

regions (UTRs) and upstream regulatory regions which control the location, development stage, rate, and quantity of protein synthesis, a well as stability of maka. The ESTs are also useful as probes for chromosome mapping, and to obtain full length cONA clones. The ESTs can also be used in forensic procedures to identify individuals, or in diagnostic procedures to identify individuals, or in diagnostic procedures to identify individuals having genetic diseases resulting from abnormal gene expression. The products may also be used gone therapy protocols. The nucleic acids encoding signal peptides can gene therapy protocols.
                                                                                                      ARA42265 to ARA43075 represent novel 5' exprossed sequence tag (EST) sequences corresponding to human secreted proteins ARA46651 to ARA45649 represent the EST-related proteins corresponding to ARA42365 ARA454052. The 'EST's can be used for producing secreted human general ARA43052. They can be used to identify and isolate 5' untranslated products. They can be used to identify and isolate 5' untranslated

directing extracellular secretion of a polypeptide

or.

growth hormone (GH) activity in the liver, or predicting a change in the condition of the liver in response to abnormal GH activity. The method involves correlating the level of expression of certain specific genes with the level of GH activity in the liver, or with an expected change in the condition of the liver as the result of GH activity. Excessive GH

The invention relates to a method of diagnosing abnormal levels of

The proteins encoded by the EST sequences may be useful into a cell. The proteins encoded by the EST sequences may be useful treating a variety of human conditions. Secreted proteins he therapeutic value, and the identification of new secreted proteins is valuable. ANZ42249 to ANZ42264 and ANZ46464 to ANZ4650 represent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 activity in the liver is thought to be deleterious to health, causing an increase in liver size as a consequence of both hyperplasia and hepatocyte hypertrophy, and hepatocellular lesions which progress with age. Studies in transgenic mice which express high levels of bovine growth hormone identified a number of genes whose expression in the liver is altered by high GH levels. The genes which are upregulated are
                                                                                                                                                                                                                                                                                                                                                       acquired immunodeficiency syndrome; infiammatrory disorders, sociasis, AIDS; embryonic disorder; brain; cerebral coedema; ischaemia; tumour; prostate; cerebrovaṣcular disease; picultary; Cushing's disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    liver genes and proteins are useful as diagnostic markers of liver pathology. Assays for the expression of these genes is useful for the diagnosts of liver pathologies associated with gigantism or acromegaly or with diabetes, as other causative agents may act directly or indirectly
                                                         Misc-difference
                                                                                                                                                                                                        Homo sapiens

LIR coding sequences may be used in the gene therapy of disorders mediated directly or Indirectly by defective or insufficient amounts of any of the LIR polypeptides. The LIR polypeptides can be used to treat autoimmune polypeptides. The LIR polypeptides can be used to treat autoimmune

                                                                                                                          allergy, colorectal or breast cancer. Jymphöma; leukaemia, infection by intracellular pathogens etc). The antagonists are also useful as immunomodulators and inhibitors of viral (e.g. human immune deficiency or dengue viruses) entry into cells. The proteins may also be used to screen for aspecific binding agents, i.e. (antisygonists, for raising antibodies (Ab), and for identification of particular cells or tissues. The Ab can be used therapentically as antagonists, as assay reagents for dispositic determination of the proteins. The DNA and its fragments are affinity purification of the proteins. The DNA and its fragments are sectul as hybridisation probbes or primers for isolating related gence, in any pridisation cromosome mapping) and dispositically to measure
                                                                                                                                                                                                                                                                                                                                                           This sequence is the Fc receptor like III protein (FCR-III) of the invention cells containing the DNA are used to express the recombinant protein, and to screen for specific (ant)agonists. The proteins are used

Host cells transformed with a vector which are capable of expressing a leukocyte immunoglobulin like receptor (LIR), can be used to produce the LIR polypeptide. LIR coding sequences may be used in the gene therapy of disorders mediated directly or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     having TTMs are inhibitory receptors mediating negative signalling, whilst those lacking ITTMs are activatory receptors. Fallure of a receptor that mediates negative signalling could result in autoimmune diseases, whilst fallure of a receptor mediating activatory signalling could result in suppressed immune function. They are also useful to produce probes for detecting LIR nucleic acids or isolating LIR DNA from the problem of the problem of the problem.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          amounts of LIR polypeptide. LIR-P3G2 and certain other LIR family members contain cytoplasmic immunoreceptor tyrosine-based inhibitory motifs (ITIMS), whilst other LIR family members lack ITIMS. By analogy with the structure and function of known MHC Class I receptor molecules, LIRs

The present sequence is given in a specification relating to an isolate nucleic acid molecule encoding a platelet mombrane glycoprotein recepto glycoprotein vi (GPVI), also called TANGO 268. The GPVI polynucleotides

polypeptides and

their modulators,

e.g.

nucleic

acids

receptor isolated 30-JUN-1999; 06-DEC-1999; 14-FEB-2000;

fragments - and related vectors, transformed cells and antibodies, useful for treating and diagnosing diseases of the haematopoietic
                                                                                   and immune systems
23; Fig 4A; l41pp; English
```

minis sequence is the Fo receptor-like V protein (FRF-IV) of the invention. Cells containing the DNA are used to express the recombinant protein and to screen for specific (ant)sayonists. The proteins are used to induce phagocytosis, and their (ant)sayonists are used to treat immune complex related diseases (e.g., rheumatosid arrhritis, systemic lupus carpine to the protein of the protein and protein by allery, colorectal or breast cencer, lymphoma, leukaemia, infection by allery, colorectal or breast cencer, lymphoma, leukaemia, infection by allery, colorectal or breast cencer, lymphoma, leukaemia, infection by cintracellular pathogens etc). The antagonists are also useful as complex relations and inhibitors of viral (e.g., human immune deliciency or dengue viruses) entry into cells. The proteins may also be used to screen complex conditions and interpretation of particular cells or tissues. The Ab can be used therapeutically as antagonists, sa assay reagents for diagnostic condition of the levels of expression of the proteins and for a fitner with protein and the frameworks. affinity purification of the proteins. The DNA and its fragments are useful as hybridisation probes or primers for isolating related genes, situ hybridisation (chromosome mapping) and diagnostically to measure mRNA expression. 'n

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   having TTMMs are inhibitory receptors mediating negative signalling, whilst those lacking TTMMs are activatory receptors. Failure of a receptor that mediates negative signalling could result in autoimmune diseases, whilst failure of a receptor mediating activatory signalling could result in suppressed immune function. They are also useful to produce probes for detecting LIR nucleic acids or isolating LIR DNA from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           amounts of LIR polypeptide. LIR-P3G2 and certain other LIR family members contain cytopiasmic immunoreceptor tyrosine-based inhibitory motifs (ITINS), whilst other LIR family members lack TIIMS. By analogy with the structure and function of known MHC class I receptor molecules, LIRs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents a novel leukocyte immunoglobulin-like receptor (LIR) polypeptide LIR-pmb2. This sequence can be administered therepoutleally to treat disorders associated with insufficient/defective

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents human 9949 polypeptide HM18. The present invention also describes: (1) a fusion polypeptide comprising a human 9949 component and Foest or a detectable marker; (2) a recombinant nucleic acid encoding human 9949 or a human 9949-Foest [siston as above; (3) a cell or vector comprising the recombinant nucleic acid as in (2), and (4) an antibody which selectively binds to 9949. Manmallan 9949 or its related DMA can be used to treat an undestred immune response, especially a mast cell-related disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                           Most cells transformed with a vector which are capable of expressing a lewkcyter immunoglobulin like receptor (LIR), can be used to produce the LIR polypeptide. LIR coding sequences may be used in the gene therapy of disorders mediated directly or indirectly by defective or insufficient amounts of any of the LIR polypeptides can be used to treat autoLimnunc glaspesses and disease states with suppressed immune function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cosman DJ

This sequence represents a novel leukocyte immunoglobulin-like receptor (LIR) polypeptide LIR-pubbrew. This sequence can be administered therapeutically to treat disorders associated with insufficently defective amounts of LIR polypeptide. LIR-p302 and certain other LIR family members contain cytoplasmic liminoreceptor tyrosine-based inhibitory motifs (ITIHS). Whilse other LIR family members lack KINHS. By analogy with the structure and function of known MHC Class I receptor molecules, LIRs
                                                                                                         diseases, whilst failure of a receptor mediating activatory signaling could result in suppressed immune function. They are also useful to produce probes for detecting LIR nucleic acids or isolating LIR DNA from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 4; Page 94-96; 112pp; English

contain cytoplasmic immunoreceptor tyrosine-based inhibitory motifs (ITIMS), whilst other LIR family members lack ITIMS. By analogy with the structure and function of known MHC Class I receptor molecules, LIRs having ITIMS are inhibitory receptors mediating negative signalling, whilst those lacking ITIMS are activatory receptors. Failure of a receptor that mediates negative signalling could result in autoimune diseases, whilst follure of a receptor mediating activatory signalling could result in suppressed immune function. They are also useful to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Leukocyte immunoglobulin-like receptor, LIR, polypeptides - useful,

                                                                                                                                                                                                                                                                                                                                                                                                                  Host cells transformed with a vector which are capable of expressing a leukocyte imminoglobulin like receptor (LIR), can be used to produce the LIR polypeptide. LIR coding sequences may be used in the gene therapy of discorders mediated directly or indirectly by defective or insufficient amounts of anyof the LIR polypeptides can be used to treat autoimmine of seases and disease states with suppressed immune incretion.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a Napi restriction endonuclease (NapiR), obtained from Nostoc sp. The NapiR is recombinantly obtained using a Napi methylase (NapiR) promodified E. colik strain RigammabE3). The endonuclease and methylase are useful for creating recombinant DNA molecules. The present sequence represents a Nostoo NapiR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated DNA encoding the NspI endonuclease and methylase, useful for creating recombinant DNA molecules - \,

of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
                            The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes new proteins for inhibiting dephosphorylase. The proteins can be combined with tyrosine phosphatase SHP-1, SHP-2 or inositol-5-phosphatase SHIP by phosphating tyrosine. The present invention also describes an immunoreceptor comprising one the above proteins, and DNA coding the above proteins. The new proteins can be used as an immunomodulatory agent. The present sequence
                                                                                                                                      Claim 8;
                                                                                                                                                                                 and/or diagnosis of the
                                                                                                                                                                                                                                           WPI; 2001-318749/34.
                                                                                                                                                                                                                                                                                        Ota T,

                                                                                                                                                                                                                                                                                                                                                                                                                   in gone therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs The primers are also useful for the detection and/or diagnosis of the shootmality of the price accorded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs are primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH0324 represent human cDNAs sequences: AAH03246 to AAH0324 consistent could sequences; and AAH03629 to AAH0362
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of
                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and

HIV infection, Leucine multi-repeating sequence 71 and encoded polynuclootide applicable in diagnosis and treatment of malignant tumor, hemop N-PSDB; AAH48534. immunological diseases treatment of malignant tumor, hemopathy, and various inflammations

Claim Page 30-32; Chinese

The invention relates to an isolated polypeptide of leucine multi-repeating sequence 71 comprising a sequence of 647 amino acids, or its fragment, analogue or derivative. The polypeptide and the polynucleotide encoding it are useful in the diagnosis and treatment

The present sequence is the
                                                                                                                                                                                                                                                                                                                                    The present invention describes new proteins for inhibiting dephosphorylase. The proteins can be combined with tyrosine phosphatase SHP-1, SHP-2 or inositol-5-phosphatase SHIP by phosphating tyrosine. The present invention also describes an immunoeceptor comprising one the above proteins, and DNA coding the above proteins. The new proteins can be used as an immunomodulatory agent. The present sequence

The proteins can be combined with tyrosine phosphatase SHP-1, SHP-2 or inositol-5-phosphatase SHIP by phosphating tyrosine. The present invention also describes an immunoreceptor comprising one the above proteins, and DNA coding the above proteins. The new proteins can be used as an immunomobilatory agent. The present sequence represents a protein from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAY24320;

I This sequence can be administered their polypeptide LIR pubbé? I this sequence can be administered their polypeptide LIR pubbé? I this sequence can be administered to their pubbé and their pubbé and their contain cyterial polypeptide. LIR PBG2 and certain other LIR family members contain cyterial pubbé. The pubbé and their contain cyterial pubbé and their contain cyterial pubbé. The sequence of their cyterial pubbers and their cyterial pubbers. The cyterial pubbers and their cyterial pubbers. The cyterial pubbers are activities and their cyterial pubbers and their cyterial pubbers.
                                                                                                                                                                                                                                                                                                                                                       receptor that mediates negative signalling could result in autoimmune diseases, whilst failure of a receptor mediating activatory signalling could result in suppressed immune function. They are also useful to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 4; Page 73-74; 112pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Leukocyte immunoglobulin-like receptor, LIR, polypeptides - useful e.g. for treating autoimmune diseases or disease states associated

LIR coding sequences may be used in the gene therapy of disorders mediated directly or indirectly by defective or insufficient amounts of any of the LIR polypeptides. The LIR polypeptides can be used to treat autoimmune diseases and disease states with suppressed immune function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Leukocyte immunoglobulin like receptor; LIR; gene therapy; autoimmunity; autoimmune disorders; immune system; human;

This sequence represents a novel leukocyte immunoglobulin like receptor (LIR) pollypeptide LIR-PGG. This sequence can be administered therapeutically to treat disorders associated with insufficient/defective amounts of LIR pollypeptide. LIR-PGG and cortain other LIR family members contain cytopiasmic immunoreceptor tyrosine-based inhiptory powers (TTMs), whilst other LIR family members lack TTMS, analogy with the structure and function of known MMC class I receptor molecules, LIRs maring TTMS are activation; receptors signalling, whilst those lacking ITMs are activation; receptors. Failure of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         LIR-9362; immunoregulator; leukocyte immunoglobulin-like receptor; LIRs therapeutic; treatment; disorder; TTM, HMC class I receptor; inhibitor cytoplasmic immunoreceptor tyrosine-based inhibitory motif; activator;

                                                                                                                                                                                                                                                                                  AMA62779-88 are encoded by human moncyte genes, collectively designated KF03. The genes are found in activated moncytes. The specification also describes other proteins encoded by activated monceytes, which are designated FF03 and YEQI. The genes function in controlling development, differentiation, and/or physiology of the mammalian immune system. The products can be used for treating shormal proliferation, regeneration, degeneration or attophy. They can be used
                                                                                                                                 Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              D
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           õ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δ
                       aniagonists can also be used to treat restenosis caused by migration of smooth muscle cells following angiphlasty and to reduce blood supply to selected tissues. The antagonists particularly inhibit neovascularisation where this is induced by cytokinos, e.g. transforming growth factor alpha, epidemail growth factor or especially vascular endothein factor alpha, epidemail growth factor or especially vascular endothein factor.
                                                                                                                                                             metalloprotease 2 (MMP-2) protein (ANM41227). The present peptide is derived from anno acids 516-537. The peptides are able to act as alpha-v-beta-5 antagonists. Alpha-v-beta-5 is a vitronectin receptor inhibitors of alpha-v-beta-5 can inhibit angiogenesis. The specification describes a novel labelled package that contains an inhibitor of angiogenesis i.e. an alpha-v-beta-5 antagonising polypeptide that binds to integria alpha-v-beta-5 and includes a part of the C-terminal domain of MMP-2. The antagonists are used to inhibit angiogenesis in inflamed tissue. In solid tumours or metastases, and an a vide range of coular disorders (e.g. diabetic or other forms of retinopathy, necessicular
                                                                                                                                glaucoma, or corneal transplants). They are particularly used to induce regression or to inhibit growth of tumours. The alpha-v-beta-5
                                                                                                                                                                                                                                                                                                                                                                             Claim 2;

The present peptide is metalloprotess-2 (MMP-2) protein (ANAI127). The present peptide is derived from amino acids 44-537. The peptides are able to acc as alpha v-beta-5 antegonists. Alpha-v-beta-5 is a vitrometin receptor. Inhibitors of alpha-v-beta-5 can inhibit angiogeness in the peptide that binds and open concellabel and people that contains an inhibitor of the period of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         blood supply to selected tissues (claimed). The new antagonists are highly selective for analogonesis. Only mew blood vessels express alpha-v beta-3, so mature vessels are unaffected, and the antagonists
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     should be of low toxicity.
                   tissue, in solid tumours or metastases, and in a wide range of ocular disorders (e.g. diabetic or other forms of retinopathy, meovascular glaucoma, or corneal transplants). They are particularly used to induce regression or to inhibit growth of tumours. The alpha-v-beta-5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
